EDUCATION

University of Georgia

Athens, GA

B.S. in Computer Science; Minor in Cognitive Science; Certificates in Data Science + Cybersecurity

Fall 2027

- Relevant coursework: Data Structures & Algorithms, Systems Programming, Operating Systems, Database Management, and Software Engineering (allowed me to work on an **Agile/Scrum** team project using **Jira** and **Git** workflows)

EXPERIENCE

Co-Founder & Lead Technical Developer, Spotr | spotrcars.com – reverse CRM for vehicle acquisition 2026 – Present

- Founded and built **Spotr**, a platform that gives car dealerships a single workspace to discover, contact, and acquire private-seller vehicles from Facebook Marketplace, Craigslist, and Autotrader before competing dealers reach them.
- Architected a full-stack **Next.js** (App Router) application with **React**, **TypeScript**, **Prisma**, and **NextAuth**, featuring a drag-and-drop deal pipeline and listing fit-scoring that ranks opportunities by fit, listing age, and margin potential.
- Built a daily **ingestion pipeline** that scrapes three listing sources, normalizes inconsistent **JSON** into one unified schema, and deduplicates records across sources, aggregating **80+ fresh private-seller listings daily** for dealers.
- Containerized the app with **Docker** and deployed it to production at spotrcars.com via **Dokploy** on self-managed infrastructure with automated build and deploy on push, with early pilots now underway at a few dealerships.

Systems Administrator, Kappa Theta Pi | Athens, GA / Atlanta, GA August 2025 – Present

- Administered a **Proxmox** virtualization host in an Atlanta datacenter, provisioning and maintaining **LXC** containers that run the organization's website, documentation, authentication service, game servers, and internal tooling.
- Deployed containerized services with **Docker** behind a **Traefik** reverse proxy, using **Dokploy** and **Crafty** to automate application deployment, routing, and service management across the organization's entire self-hosted infrastructure.
- Hardened security by tightening firewall rules, enforcing **SSH key authentication**, and migrating SSO from Authelia to **Authentik** to centralize authentication and access control for all chapter members across every hosted service.

IT & Cloud Infrastructure Intern, Shattuck Labs | Durham, NC August 2023 – January 2024

- Configured, maintained, and troubleshooted enterprise hardware and network systems, ensuring consistent uptime, and assisted **cybersecurity** specialists with **incident response** procedures and secure network configuration changes.
- Supported **AWS** server provisioning, **IAM** access management, and **VPC** network configuration in a production cloud environment, and automated routine admin tasks and system diagnostics with **Bash** scripts on Unix-based systems.

PROJECTS

Optimus Inventory Health Dashboard | Next.js, TypeScript, FastAPI, SQLite, Docker Compose

- Won **2nd place out of 150+ teams** and an honorable mention (NCR Voyix track) at **UGAHacks 11** in Athens, GA.
- Built a full-stack inventory health dashboard for retail operators, surfacing **stockout risk**, **anomaly flags**, confidence scoring, transfer recommendations, and peak-hour prep schedules across multiple store locations in a single view.
- Designed a **FastAPI REST** backend with **Pydantic** validation and **SQLAlchemy** services powering demand forecasting, anomaly detection, transfer optimization, and peak-hour demand analysis for every store location in the network.
- Containerized the **Next.js** frontend and FastAPI backend with **Docker Compose**, enabling one-command setup.

Distributed NoSQL Key-Value Store | Go, Raft, Proxmox, LXC

- Built a key-value store in **Go** with **write-ahead log** persistence, ensuring durability across crashes and restarts.
- Deployed across **LXC containers** on a self-managed **Proxmox** host in an Atlanta datacenter, verifying data integrity and recovery through **fault-injection testing**, including repeated forced node kills and simulated unclean shutdowns.
- Designed the storage engine and replication protocol for **fault-tolerant**, horizontally **scalable** multi-node operation, applying consensus design patterns, with **Raft** leader election and **log replication** currently in active development.

TECHNICAL SKILLS

Languages: Java, Python, Go, C++, C, Rust, TypeScript, JavaScript, SQL, XML, JSON, HTML/CSS

Frameworks & Libraries: React, Next.js, Node.js, Express, FastAPI, Flask, Prisma, NextAuth, Pydantic, Tailwind CSS

Cloud & Infrastructure: AWS (EC2, Lambda, IAM, VPC, S3), Docker, Kubernetes, Terraform, Ansible, Proxmox, Linux

Data & Pipelines: Apache Kafka, ETL/data pipelines, data modeling, Grafana, MySQL, SQLite, NoSQL key-value stores

Practices & Tools: Agile, Scrum, SDLC, CI/CD, unit testing, REST APIs, data structures & algorithms, Git, Jira, Bash
