EDUCATION

University of Georgia

B.S. in Computer Science; Minor in Cognitive Science; Certificate in Applied Data Science

Athens, GA

May 2027

EXPERIENCE

Founder, Spotr | spotrcars.com – reverse CRM for private-party vehicle acquisition

2026 – Present

- Founded and built **Spotr**, a platform that gives car dealerships a single workspace to discover, contact, and acquire private-seller vehicles from Facebook Marketplace, Craigslist, and Autotrader ahead of competitors.
- Architected a full-stack **Next.js** (App Router) application with **React**, **TypeScript**, **Prisma**, and **NextAuth**, featuring a drag-and-drop deal pipeline and listing fit-scoring that ranks opportunities by fit, age, and margin potential.
- Containerized the app with **Docker** and deployed it to production at spotrcars.com via **Dokploy** on self-managed infrastructure, aggregating **80+ fresh private-seller listings daily**, with early dealership pilots underway.

Kronos Systems Administrator, Kappa Theta Pi | Athens, GA / Atlanta, GA

August 2025 – Present

- Administered a **Proxmox** virtualization host in an Atlanta datacenter, provisioning and maintaining **LXC** containers that run the organization's website, documentation, authentication service, game servers, and internal tooling.
- Deployed containerized services with **Docker** behind a **Traefik** reverse proxy, using **Dokploy** and **Crafty** to automate application deployment, routing, and service management across the organization.
- Hardened security by tightening firewall rules, enforcing **SSH key authentication**, and migrating SSO from Authelia to **Authentik** to centralize authentication and access control across all hosted services.

Intern, Shattuck Labs | Durham, NC

August 2022 – January 2023

- Configured, maintained, and troubleshot enterprise hardware and network systems, ensuring consistent uptime, and assisted **cybersecurity** specialists with **incident response** procedures and secure network configurations.
- Supported **AWS** server provisioning, **IAM** access management, and **VPC** network configuration in a production cloud environment, and automated administrative tasks and system diagnostics with **Bash** scripts on Unix-based systems.

PROJECTS

Optimus Inventory Health Dashboard | Next.js, TypeScript, FastAPI, SQLite, Docker Compose

- Won **2nd place out of 150+ teams** and an honorable mention (NCR Voyix track) at **UGAHacks 11**.
- Built a full-stack inventory health dashboard for retail operators, surfacing **stockout risk**, **anomaly flags**, confidence scoring, transfer recommendations, and peak-hour prep schedules across multiple store locations.
- Designed a **FastAPI** REST backend with **Pydantic** validation and **SQLAlchemy** services powering demand forecasting, anomaly detection, transfer optimization, and peak-hour demand analysis.
- Containerized the **Next.js** frontend and backend with **Docker Compose**, enabling one-command setup.

Distributed Key-Value Store | Go, Raft, Proxmox, LXC

- Built a key-value store in **Go** with **write-ahead log** persistence, ensuring durability across crashes and restarts.
- Deployed across **LXC containers** on a self-managed **Proxmox** host in an Atlanta datacenter, verifying data integrity and recovery through **fault-injection testing**, including forced node kills and unclean shutdowns.
- Implementing **Raft consensus** (leader election and log replication) for fault-tolerant multi-node operation.

TECHNICAL SKILLS

Languages: Python, Java, C, Go, JavaScript, TypeScript, SQL, HTML/CSS

Frameworks & Libraries: React, Next.js, Node.js, Express, FastAPI, Prisma, NextAuth, Flask, Tailwind CSS

Cloud & Infrastructure: AWS (EC2, Lambda, IAM), Oracle Cloud Infrastructure, Docker, Proxmox, Traefik, Linux

Concepts: REST APIs, WebSockets, distributed consensus (Raft), virtualization, containerization, SSO/authentication

Tools & Databases: Git, Bash, MySQL, SQLite
